## EDUCATION

---

### VIT-AP University

B.Tech, Computer Science And Engineering — GPA: 8.77 / 10.0

2023-2027

## EXPERIENCE

---

### Software Engineer Intern – Web

Jan 2026 – Present

*Prayana Electric*

- Built a **client-facing contact form** with field validation, REST endpoint, and server-side request handling, replacing the company's manual email intake process
- Enforced **input validation and data cleaning** at both client and server layers to prevent malformed submissions from reaching the backend pipeline
- Collaborated on **UI requirements and API integration** using Git branching and pull request reviews, delivering the feature on schedule

### Software Engineer Intern – AI/ML

Aug 2025 – Nov 2025

*SL Tech Solutions*

- Developed a **real-time face recognition attendance system** using OpenCV and Python, automating roll call for 40+ students and cutting tracking time by 80%
- Improved recognition accuracy by 35% in poor lighting by **tuning detection thresholds and applying image enhancement**; built a local database layer for automated reporting

## PROJECTS

---

### SheetCollab | TypeScript, React, Firebase Firestore, OAuth 2.0, Vercel

Github

- Built a **real-time collaborative spreadsheet** with multi-user live editing; Firestore snapshot listeners push cell updates to all clients in under 200ms
- Resolved **concurrent editing conflicts** via optimistic concurrency with tracked writes, guaranteeing consistency across 10+ simultaneous sessions
- Configured **OAuth 2.0 via Firebase Auth** with per-user security rules enforcing document-level read/write access control

### MailScrape | Python, BeautifulSoup, Requests, CSV

Github

- Developed a **lead generation and contact extraction toolkit** that automates email discovery from target websites using configurable scraping workflows
- Designed **automated data collection pipelines** with deduplication, rate limiting, and structured CSV export; implemented retry logic for paginated content

### SprintBoard | TypeScript, Next.js, Supabase, PostgreSQL, Docker, Razorpay

Github

- Built a **task management platform** for organising projects and tracking team productivity with real-time board updates
- Implemented a **layered auth system** combining OAuth 2.0, JWT tokens, and email MFA; integrated Razorpay with webhook verification and containerized with Docker

## RESEARCH

---

### Comparative Analysis of Median, Gaussian, and Butterworth Filters | IEEE ICITEICS

2025

- Authored IEEE-published research comparing image filtering techniques for noise reduction and signal preservation.

## TECHNICAL SKILLS

---

**Languages:** Java, TypeScript, JavaScript, Python, SQL, Bash

**Frontend:** React, Next.js, HTML, CSS, Tailwind CSS

**Backend:** Node.js, Express.js, REST APIs, JWT, OAuth 2.0, WebSockets

**Databases:** PostgreSQL, Supabase, Firebase Firestore, MongoDB

**DevOps:** Docker, Kubernetes, Git, CI/CD, Vercel

**Certifications:** IBM DevOps & Agile (IBM), Postman API Fundamentals
